DETAILED ACTION

1. This communication is responsive to the applicant's amendment dated 12/14/2006.
2. The indicated allowability of claims 38 and 43-48 is withdrawn in view of the newly discovered reference(s) to Oohashi et al, U.S. Patent No. 5,276,669 and Nagashima et al, U.S. Patent No. 6,205,104. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 38 is rejected under 35 U.S.C. 102(b) as being anticipated by Oohashi.

Regarding claims 38, Oohashi discloses a device (see Figs. 1-2) for storing audio signals (it is noted that the recitation of 'parametric signals and parametric loudspeaker system' have not been given patentable weight because the recitation occurs in the preamble) comprising: an electronically readable storage medium (disc) having an audible bandwidth storage capacity; and a pre-distorted audio signal (the audio signals being stored in the disc), having distortion error correction applied thereto

(error bits for distortion correction as shown in Fig .1, for example), stored on the electronically readable storage medium.

5. Claims 43-48 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagashima.

Regarding claim 43, Nagashima discloses a device (see Figs. 1-3) for storing audio signals (it is noted that the recitation of 'parametric signals and parametric loudspeaker system' have not been given patentable weight because the recitation occurs in the preamble) comprising: an electronically readable storage medium (disc) having an audible bandwidth storage capacity; and a pre-distorted audio signal (the audio signals being stored in the disc), having distortion error correction (col. 3, lines 37-41), ultrasonic modulation and signal compression (see col. 1, Table 1 and col. 5, lines 50-55, for example) applied thereto, stored on the electronically readable storage medium.

For what's call for in claim 44, see col. 7, lines 55-65.

Regarding claim 45, the device discloses by Nagashima is used for stereo (2 channels) audio signal storing.

Regarding claim 46, twice of the sample frequency of 44.1 kHz per channel would have equals to 88.2 kHz for sampling of two channels audio signals for CD recording as shown by Nagashima.

Art Unit: 2615

Regarding claims 47 and 48, the signal compression scheme disclosed by Nagashima can be view as a lossy compression format or a lossless compression format.

Allowable Subject Matter

6. Claims 1-4, 6-8, 10-14, 16-27, 29-32, 39-42, 49-51 are allowed.

Response to Arguments

7. Applicant's arguments with respect to claims 1-16, 28 33-37 have been considered but are moot in view of the new ground(s) of rejection.
